

The **combimouse** is a patented and award winning **Combination Keyboard and Mouse**. It retains the normal mouse characteristics together with the familiar **QWERTY** keyboard. The Combimouse is a split keyboard with the right hand unit doubling as a mouse. It overcomes the problem of having to move ones hand to and from the keyboard to operate the mouse.

Status – The product is ready for commercialization together with prospective joint Venture partners. Patented.

Price – To be confirmed

Availability – To be confirmed
